

## Water Audit

**Goal:** The goal of this water audit is to understand how much water we use daily. We use a large amount of water for a lot of day-to-day activities, but unknowingly we waste a huge amount of water as well. By doing this activity, we can understand where we can save water; and help our nature.

**Requirements:** Mug, bucket, bottles, page, pencil.

### How to do it?

1. Read the table given below carefully. The activities in the table are our day-to-day activities in which we use water. Draw this table on the page, to write down your observations.
2. When you do any activity, use the water from mug or bucket or even water bottles, to track the usage of the water you have used.
3. Write down how much water you have used in each activity in Liters in the table, and make a total at the end of the day.  
\*one mug = 1 liter  
\*one bucket = 15 liters

Activities	How much water you used? (liters)
Brushing	
Bathing	
Drinking	
Cooking	
Washing utensils	
Watering plants	
Washing clothes	
<b>TOTAL</b>	

### Observations:

1. How many liters of water have you used in a day?
2. In which activities can you save the water more?
3. Are there any other activities in which you have used water?

### Instructions:

1. When you are doing this activity, do not use running tap water.
2. Do not use the shower for bathing on this day.
3. Keep a log of water usage correctly.
4. You can write down for your entire family or just yourself. In case you are writing only for yourself, for activities like cooking, washing utensils and clothes take the average.
